

NEW QX CARBON FIBRE BOOM

“Smooth Operator”

NEW QX CARBON FIBRE BOOM „A smooth operator“

Ambient is pleased announce a new carbon fibre boom series for the ENG and TV market. The new QX series has retained all the features that have made Ambient Quickpole booms so successful, adding features that will especially appeal to those working “On the road”. The new boom series can easily be recognised by the special knurling on the screwlocks, Ambient’s answer to dimples!

FEATURES

- ✓ Very stiff 100% carbon fibre tube with 1 mm wall thickness.
- ✓ Stainless steel tip with special hole for easy assembly of straight or coiled internal cabling kits.
- ✓ Heavy duty screwlock with separate renewable plastic collet, prevents scratching the tube and ensures quick release and rock tight locking of the screwlock in half a turn. Special silicone “O” ring seal prevents dirt and moisture from entering the screwlock mechanism.
- ✓ Internal Velcro bushings ensure rattle free operation and no siezing up with dirt, humidity or cold temperatures.
- ✓ The collet and the Velcro can be replaced after years of use by the user at minimal cost to give an “as new” overhaul or maintenance.
- ✓ Boom sizes have been selected to fit in flight cases. The QX 565 is a 2.6 meter extended length boom that fits diagonally in a Pelican case.
- ✓ New special bottom end allows coiled cable fixture to rotate when loosened. This feature will allow users to relax the internal spiral cable and remove twisting without opening the boom.
- ✓ Special fixing clamp delivered with cabling kit allows Lectro or Sennheiser Plug On transmitter to be clamped to boom.
- ✓ This boom series is a State of the Art piece of equipment, and, with other Ambient microphone support accessories such as Quicklok and Top Tip provides solutions to sound engineers working in the field.

BOOM SIZES	QX 550	50-195 cm, 430g
